### New Product

## **RESOLUTION Spectra Systems introduces ProCellics™**

### First Bioprocess Raman Analyzer

**Grenoble, FRANCE, November 17, 2016** – RESOLUTION Spectra Systems announces the worldwide release of ProCellics™. ProCellics™ is the first Bioprocess Raman Analyzer for the biopharmaceutical industry fully dedicated to in-line monitoring of the critical metabolites and nutrients during upstream processes, in order to maintain an optimal development of mammalian cell culture in bioreactors. ProCellics™ measures the concentration of glucose, lactate, glutamine, glutamate, ammonium, total cell density and viable cell density.

Thanks to ProCellics™, it is now possible to implement a GMP Process Analytical Technology solution for upstream processes!

ProCellics™ responds to the following biopharmaceutical industry unsatisfied needs:

- Better understand cell culture processes
- Improve quality control of the final product by implementing Quality by Design (QbD)
- Enhance batch yield and prevent batch failure
- Speed up process development, scale-up and transfer to production
- Fulfill regulatory requests

For more information on ProCellics™, please visit:

**About RESOLUTION Spectra Systems**

Founded in 2011, RESOLUTION Spectra Systems is a French 14-employee start-up company based in the Grenoble area, one of Europe's leading high-technology centers. Since 2012 it has been offering innovative optical instruments and sensors for the laser characterization and structure control markets. Based on ground-breaking technologies, those instruments offer a high level of performance, compactness, portability and usability. As of 2016, RESOLUTION Spectra Systems has been targeting the process analytics market for the biopharmaceutical industry, leveraging its cutting-edge technology thanks to skills in biotechnologies and chemometrics.
